APPLICATION AREAS

Product Overview

The HELI-3 is a high gain, directional antenna which complements our Wi-Fi MinePoynt tunnel and mine antennas. The combination of MinePoynt beam antennas for long distance Thru-tunnel links with this directional antenna, exploits Poynting's fifteen years' experience in designing and manufacturing antennas for underground mining data networks. The tunnel antenna is the ideal antenna for 2.4 - 2.5 GHz wireless applications in tunnels. In tests, both the data rate and range achieved with this antenna was greater than obtained when using linearly polarized panel antennas of the same gain. The hardy construction of this antenna makes it ideal for the mining environment. HELI-3 is a uni-directional antenna whilst the closely related HELI-8 is a bi-directional antenna. An intrinsically safe version of this antenna is available with code HELI-3-IS. The HELI-3 gives you a low-cost network infrastructure for current voice and data needs in mines and tunnels.

Features

- Uni-directional antenna
- High gain over the 2.4 GHz Wi-Fi band
- Improved performance due to circular polarisation
- Ideal for mining and tunnelling applications
- Versatile installation mounting options

Application Areas

- Supplementing fibre/cable networks by providing wireless "Hotspots" to areas to enhance mobility or extend networks to inaccessible areas such as mines and tunnels
- Underground telemetry
- Creation of complete in tunnel/mine wide data networks and/or internet connectivity
- Seamless connection to personnel using VOIP phones, smart devices and tablets
- M2M Applications

Antenna Performance Plots

VSWR

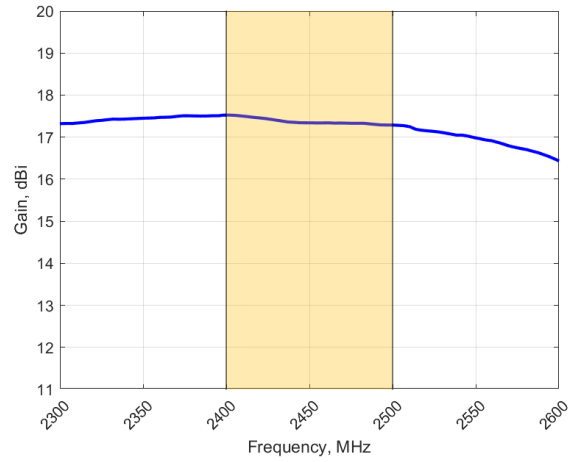

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The HELI-3 delivers superior performance across all bands with a VSWR of <1.5:1.

**VSWR measured without a cable*

GAIN (EXCLUDING CABLE LOSS)

Gain* in dBic

17.5 dBic is the peak gain from 2400 – 2500 MHz

Gain @ 2400 – 2500 MHz: 17.5 dBic

**Antenna gain measured with circular polarised standard antenna*
